A breath shield option for the phoropter is now available from the Bernell Corporation. The Phoropter Shield™ is a lightweight, easy-to-sanitize tool that quickly slips on and off most manual phoropters for added protection between doctor and patient.

The Phoropter Shield’s patent-pending design features special contours that cover the gap between the two sides of the phoropter without covering the oculars or interfering with the use of cylinder knobs, JCC units, or Risley units.

The shield is made of a polycarbonate composition can be cleaned with most disinfectants, as well as warm soap and water, to sanitize between patients.
