

PATIENT EDUCATION

If you believe you have COVID-19-associated pink eye, STAY AT HOME and contact your eye doctor's office by phone.

There is no treatment for COVID-19-associated pink eye or any other viral pink eye. But the following may help you feel better:

- Artificial tear supplements / ophthalmic lubricants
- Cool compresses

Remember, COVID-19 is highly contagious, so take care to practice good hygiene and avoid touching your eyes and carefully wash anything that comes in contact with your eyes (*e.g., bed sheets, face cloths, etc.*).

If you have the following signs/symptoms, do not attempt to self-treat and contact your eye doctor immediately:

- Severe pain
- Severe redness
- Something visible in or on the eye
